

Polar[®] Focus

Project Profile

Buffalo Bills Stadium

Polar Focus collaborated with Ronco Specialized Systems on this beautiful custom weatherized frame system for Danley Sound Labs speaker clusters at Buffalo Bills (aka Ralph Wilson) Stadium in Orchard Park, New York.

This system was designed in a way that allowed the cluster to be lifted up complete (with speakers installed) on a crane and placed onto support columns built to support the Polar Focus frame system.

The complete framing system was galvanized to withstand harsh Buffalo winters, then powder coated in UV resistant white to match the towers.

Each of the four clusters consists of three Danley GH-60 Genesis Horns, a Danley SH-95 for center fill, four Danley SH-MINI for fill right below the cluster, and two Danley TH-118 subwoofers.

Installer: Ronco Specialized Systems

Four clusters, each with:
3 Danley GH-60 Genesis Horns
1 Danley SH-95
2 Danley TH-118
4 Danley SH-MINI

Total cluster weight: 2891 lbs each
Products used: Custom Frame System
