

Polar[®] Focus

Project Profile

Our Saviours Church

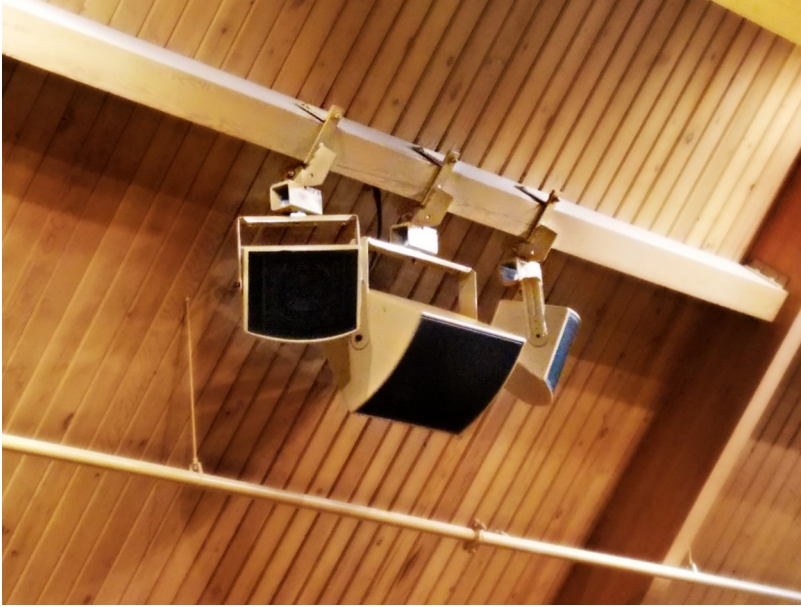

Installer: Video Services, Inc.

Designer: Dave Peterson

1 Fulcrum Acoustic GX1226

2 Fulcrum Acoustic CX896

Products used: Type 4 Custom Beam Attachment

We assisted Bob Jerrow from Video Services, Inc. in Mankato, MN with this House of Worship installation. This project was designed by Peterson AV Consulting, Inc.

Polar Focus provided three type 4 Custom Beam Attachments for the steeply rolled purlin that would suspend these Fulcrum Acoustic loudspeakers.

Our Type 4 CBA is for attachment to a rolled wood beam and provides a rigging point that can mount a Zbeam arm or a yoke (u-bracket) or other components. Accessories attaching to the bottom of the CBA Type 4 are sold separately.

The design utilized one Fulcrum GX1226 and two Fulcrum Acoustic CX896 speakers mounted in matching yokes. This rolled purlin had the steepest roll angle of any type 4 CBA installation we've ever done.
