

Polar[®] Focus

Installer: TSI Global

12 Arrays, each with 12 Vertec VT4889A

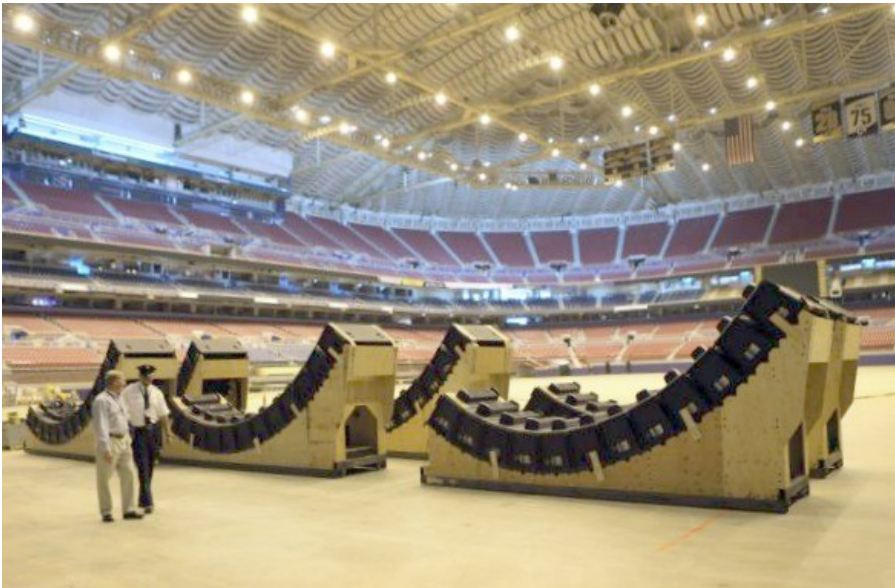

2 Arrays, each with 9 Vertec VT4887A

2 Arrays, each with 12 Vertec VT4887A

Products used: Motor Zbeam

Project Profile

St. Louis Rams Stadium Edward Jones Dome, St. Louis, MO

Lee Buckalew from TSI Global got in touch with us for assistance rigging these JBL Professional Vertec arrays at Edwards Jones Dome in St. Louis, MO.

We supplied TSI with custom rigging systems for these JBL Vertec line arrays. There were 12 arrays, each with 12 Vertec VT4889A loudspeakers. There were also four arrays in a “wide smile” configuration with 9 Vertec VT4887A and 12 Vertec VT4887A.

Polar Focus provided engineering input, creating a system that provided solutions for ease of service while simplifying the seismic restraint needs, all while increasing the seismic protection offered. We worked with the design and installation teams to address challenges unique to the Edward Jones Dome, including the shape of the dome, including good coverage for both lower and upper seats.

We also built custom line array transport carts for all of the arrays, for ease in shipping and installation. Technicians were able to pick these arrays up with a chain hoist and lift them out of the carts, allowing for super clean and easy installation on the venue floor.
